Interview Summary

Paper No. 20050128

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Demonstration of applicant's anchorage device was performed. Some key structural elements were identified, specifically, the movement of the pawl, the teeth off the pawl, the structure of the beam, and the positioning of the apertures within the beam. The structure of the pawl and receipt into the apertures, appear to be the more novel aspects of the invention. However, the proposed claim 16 "reads-on" the Gagnon and Whitmer references. Applicant was informed that an additional search would still be required.
